The present invention describes a method (MI) for screening for an antinoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (given in AbleGe64 to Abl70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cyrostatic activity and can be used in gene therapy. MI can be used for screening an anti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of MI, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney, prostate or pancreatic cancer, adenocationem, carcinoma, class cells cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            456
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.

## Claim 1; SEQ ID NO 6941; 44pp; English

The present invention describes a method (M1) for screening for an anticomplastic agent. The method involves exposing cells to a chemical agent
to be tested for anti-neoplastic activity, determining a change in
expression of at least one gene (I) of a signature gene set, where (I)
comprises a sequence (S) selected from 8447 sequences (given in ABL61664
comprises in indicative of anti-neoplastic activity. (I) has cytostatic
comprises in a to least 195% identical to (S), where a change in
comprises on the act least 95% identical to (S), where a change in
comprises of the act of anti-neoplastic activity. (I) has cytostatic
anti-neoplastic agent, and can be used for producing a product which is
contivity and can be used in anti-neoplastic agent as a result
of M1, and the data is sufficient to convey the chemical structure and/or
properties of the agent. M1 can be used in the treatment of cancer such
as colon, breast, stomach, lung, thyroid, ossophageal, ovarian, kidney,
prostate or pancreatic cancer, adenocarchoma, clear cell
cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's

The method of the invention has hepatocropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying crossion profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, of rung toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was the wipo int/pub/published_pot_sequences

New cDNAs, which are differentially expressed in (metastatic) breast cancer useful for diagnosing or staging, breast cancer, or for monitoring the treatment of breast cancer in an individual.

ď ð 윤 8 d ò

원 ò 셤 8

8

Claim 1; SEQ ID NO 36; 30pp; English

The invention describes a combination of CDNAs (designated BC-CDNAs), which are differentially expressed in breast cancer. The combination includes 152 cDNA sequences, or their complements. The protein encoded by any of these BC-CDNAs is useful for screening several molecules or compounds to identify at least one ligand that specifically binds the protein, producing or preparing polyclonal or monoclonal antibodies, or burifying antibodies from a sample. The antibodies, which specifically bind the protein differentially expressed in breast cancer is useful for descring the expression of a protein in a sample. The BC-CDNAs are also useful for diagnosing, monitoring the treatment of, or staging, breast cancer associated CDNA. Note: The sequence data for this patent did not format directly from the US patent office at

Polypeptide(s) with calmodulin- and actin binding activities - useful for tracting and diagnosing cancer and regulating digestive tract motility as vasodilators.

Disclosure; Page 33-34; 47pp; English

a cDNA clones that encode polypeptide of human caldesmon were selected from a caid sequence encoding human caldesmon were deduced by DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis.

Cacid sequence encoding human caldesmon were deduced by DNA sequence analysis.

Call Next, the inventors prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide.

Call calmodulin-binding activity and extin- binding activity as indices. There are two forms of caldesmon. The form of higher mol. wt. is called type I and the form of lower mol. wt. is called type II. 312AA is and 118A are polypeptide that have a sequence of 116 ABs in the C-terminal sequence of 312AA, and 94AA and 90AA are polypeptides that have a sequence of 118AA there are residues Met-Ala that originated from a PCR primer, continued of 100AA, there are residues Met-Ala that originated from a PCR primer, corriginated from a PCR primer. The polypeptide of 116 AAB has both calmodulin-binding activity and actin-binding activity. Type I, type II, 312AA, 118AA, 118A

Sequences AAH33071-23152 represent nucleic acid sequences derived from osteoarthrits tissues. The sequences are useful as probes and for the diagnosis or prognosis of mammalian osteoarthritis. The polymucleotides and holypeptides of the invention are useful for generating diagnostic reagents, as targets for small molecule drug development, generation of therapeutics, and cloning genes Specific antibodies are used to generate invented memosorbent assays for detection of osteoarthritis. The invented molecules can be used to treat osteoarthritis or to analyse the disease-modifying activity of osteoarthritis drugs. Other disorders treatable using the nucleic acid sequences include atopic, inflammatory and infectious disorders e.g. Crohn's disease and sepsis, and wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Substantially purified protein, polypeptide or their fragments, used to identify a biologically active compound or composition and treat mammalian osteoarthritis.
Osteoarthritis tissue-derived nucleic acid sequence #32
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ×

controlled that encode polypeptide of human caldesmon were selected from a containing the cells, and the DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis. Next, the inventors prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptides. Very cand looked for the functional domain of human caldesmon polypeptides. Or using calmodulin-binding activity and actin-binding activity as indices. There are two forms of caldesmon. Wr. is called type II. 312AA is a since type I and the form of lower mol. Wr. is called type II. 312AA is and conjypeptide that is the C-terminal portion of types I and II. 122AA and colypeptide that thave a sequence of 116 As in the C-terminal colypeptides that have a sequence of 118AA that are in the central portion. On the N-terminal colypeptides that are in the central portion. On the N-terminal colypeptide for the N-terminal portion and the C-terminal portion on the N-terminal of 90AA, there are residues Met-Ala that originated from a PCR primer. Or ilsaAA, there are residues Met-Ala that originated from a PCR primer. Or the N-terminal of 122AA and 94AA, there are residues met-Ala that originated from PCR primer. The polypeptide of 116 AAS has both calmodulin-binding activity and actin-type II, type II, 1312AA, 118AA, 118AA, 118AA, 118AA, 118AA, 118AA all have tropolypeptide of 116 AAS has both calmodulin-binding activity and activity or crimonyosin-binding activity and have an inhibitory activity and activity or actomyosin ATPase, and so the functional unit of human caldesmon is identified as being 116AA. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2171
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2231

C CONA library prepd. from HeLa cells, and the DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence and analysis. Next, the inventors prepared polypeptides of various lengths, and looked for the functional domain of human caldesmon polypeptide.

C and looked for the functional domain of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide.

C using calmodulin-binding activity and activity as indices activity as indices.

C type I and the form of lower moi. Wt. is called type II. 312AA is a land II. 122AA and type pride that is the C-terminal portion of types II. 312AA is a companied that is the C-terminal portion of types II. 312AA is a sequence of 312AA, and 94AA and 90AA are polypeptides that have a sequence of 116 AAS in the C-terminal contribution of the N-terminal contribution of the N-terminal contribution of the N-terminal contribution and the C-terminal portion. On the N-terminal continued from a PCR primer.

C of 118AA, there are residues Met-Ala Creminal portion. On the N-terminal continued from a PCR primer.

C and on the N-terminal of 90AA, there are residues Met-Ala that also corginated from a PCR primer.

C originated from a PCR primer. On the N-terminal of 122AA and 94AA, there are residues Met-Ala that chain also contains the collypeptide of 116 AAS has both calmodulin-binding activity and activity and ctrivity and have an inhibitory activity. Type I, type II, 312AA, 118AA, 118AA, 116AA all have cropmyosin-binding activity and have an inhibitory activity. Type I, type II, 21AA, 118AA, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polypeptide(s) with calmodulin- and actin binding activities - useful for tracting and diagnosing cancer and regulating digestive tract motility as vasodilators.
                                                                                                                                                                                                                                                Caldesmon; calmodulin; actin; binding; actomysin system; regulation; ss
                                                                                                                                                                              Sequence encoding a polypeptide of human caldesmon designated type (heavy) AA.

count clones that encode polypeptide of human caldesmon were selected from a cDNA library prepd. from Hela cells, and the DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis. Next, the inventors prepared polypeptides of various lengths, analysis. Next, the inventoral domain of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide. There are two forms of caldesmon. The form of higher mol. wt. is called type I and the form of lower mol. wt. is called type I and the form of lower mol. wt. is called type II. 312AA and of the contrainal portion of types I and II. 122AA and polypeptide that are in the central portion of 118AA, lacking sequence of 88 AAs that are in the central portion of 118AA, lacking sequence of 88 AAs that are in the central portion of 118AA, lacking collaboration of the N-terminal portion of 118AA, lacking of 118AA, there are residues Met-Ala that also and on the N-terminal of 90AA, there are residues Met-Ala that also criginated from a PCR primer. On the N-terminal of 122AA and 94AA, there are residues Met-Ala that also
                                                                                                                                    2800
                                                                                                                                                                                                      1650
                                                                  1590
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polypeptide(s) with calmodulin- and actin binding activities - useful for tracting and diagnosing cancer and regulating digestive tract motility as vasodilators.

                                                                                                                                                                                                                                                                                                                                                                                              703
are residues Met-Ala that originated from PCR primer. The polypeptide (typeI, 192AA, 122AA, 118AA, and 116AA) that contains the polypeptide of Il6 AAs has both calmodulin-binding activity and actin-binding activity. Type I, 1990 II, 312AA, 122AA, 118AA, 116AA all have tropomyosin-binding activity and have an inhibitory activity to actomyosin-binding activity and have an inhibitory activity to accompany as the functional unit of human caldesmon is identified as being 116AA. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ACAGCAGACTAGGAGCAGTATACCAGTGCAATTGAGGGAACAAAAAGGGCAAAAACCTACAA

count ilbrary prepd. from HeLa cells, and the DNA sequence and the amino acid sequence encoding human caldesmon were deduced by DNA sequence analysis. Next, the inventors prepared polypeptides of various lengths, analysis. Next, the inventoral operation of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide, and looked for the functional domain of human caldesmon polypeptide. There are two forms of caldesmon. The form of higher mol. wt. is called type I and the form of lower mol. wt. is called type II. 312AA and 194A, and 194A and 90AA are polypeptides that have a sequence of 116 Aps in the C-terminal sequence of 88 AAs that are in the central portion of 118AA, lacking both the N-terminal portion and the C-terminal portion. On the N-terminal C of 118AA, there are residues Met-Ala that originated from a PCR primer. Or the N-terminal of 90AA, there are residues Met-Ala that also originated from a PCR primer. On the N-terminal of 122AA and 94AA, there are residues Met-Ala that also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          are residues Met-Ala that originated from PCR primer. The polypeptide (typeI, typeII, 312AA, 122AA, 118AA, and 116AA, that contains the bolypeptide of 116 AAs has both calmodulin-binding activity and actin-binding activity. Type I, type II, 312AA, 122AA, 118AA, 116AA all have tropomyosin-binding activity and have an inhibitory activity to actomyosin Arpaes, and so the functional unit of human caldesmon is identified as being 116AA. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CCCAAACCTTCTGAGTTGAGACCAGGAGACGTATCCAGCAAGGGGGAACCTCTGGGAAAAG

The present sequence is one of a large number of 5' ESTs derived from manya encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or polyak RNAs derived from 30 different tissues. Ests squences usually correspond mainly to the 3' untranalated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with inteact 5' ends and can therefore be used to obtain full length cDNAs and encounted the longer cDNA sequences and encounted from uppartness and chromosome mapping procedures. They are used to obtain uppartness regulatory sequences and to design expression and secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  73

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         999
                                                                                                                                                                                The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a mucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product with an agent that specifically product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, colon cancer, gastric cancer, prostate cancer and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
New isolated cancer associated nucleic acids and polypeptides - isolated using sera from cancer patients, used to develop products for the diagnosis, monitoring or treatment of cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GAGAAGCTCAAACAGAAGCAGCAGGAGGCGCTTTGGAGCTGGAGGAACTCAA-GAAAAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method for diagnosing a disorder characterised by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast cancer, renal cancer, gastric cancer, prostate cancer and
New isolated cancer associated nucleic acids and polypeptides - isolated using sera from cancer patients, used to develop products for the diagnosis, monitoring or treatment of cancers.

AAC77607 to AAC78486 encode the human cancer associated proteins given in AAC77607 to AAC4239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic, proliferative, vulnerary; immunomodulator; antidiabetic; antiasthmatic; antitherary; immunomodulator; antidiamatory; antilithyroid; antialregic; antibactic; antiasthmatic; antitherary; immunomodulator; carminomodulator; antidiamatory; antiphrorective; cardiant; thrombolytic; coagulant; corresponderation; ansological; antiphrorective; cardiant; thrombolytic; coagulant; coorropic; vasotropic; antippsoriatic and antiangiogenic. The nootropic; vasotropic; antippsoriatic and antiangiogenic. The present invention may be used to reat immune disorders by activating corresponding antibodies; agonists and antagonists from immune cells, polypeptides, antibodies; agonists and ordanned inferentiation of mobilisation of immune cells, to treat disorders of haematopoietic cells, autoimmune rejection, modulate haemostatic or thrombolytic activity, modulate rejection, modulate haemostatic or thrombolytic activity, modulate rejection, modulate haemostatic or thrombolytic activity, modulate agonists and antagonists may be also be used in drug screens. AAC78449 to agonists and antagonists may be also be used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3062
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              3122

ANH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to expression by rectifying mutations or deletions in a patient's genome to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 time of publication, meaning no sequences are present for SEQ ID NO:1027 3183 AGABABATGAACCGTAGTTTTTGTTTTTTABATACAGAAGTCATGTTGTTTTTGACTT 3242 TATAATAAAGCATGGAAGAAATTATCTTAGTAGGCAATTGTAACACTTTTTGAAAGTAAC 3302 493 AGAAAAATGAACCGTAGTTTTTTTTTTTTAATACAGAAGTCATGTTGTTTCTGCACTT 552 433 ACATCTGAAGTCAACAGAAGATCCAAGTTTAAAATTGCCTGCGGAATGTGTGCAGTATCT 492 Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.
